# FRANCIS OSCAR T. **MAGTUTO**

#### **OBJECTIVE**

Seeking a suitable job where I can continue to apply my knowledge as a web developer specializing in back-end services, aiming to capitalize on personal growth and contribute to the organization's development.

### **Background Summary**

I am a web developer with a primary focus on back-end APIs. Although my expertise lies in back-end development, I am also proficient in front-end development and handle those tasks when they are straightforward and no other developers are available. In my role, my main responsibility is to create REST APIs that retrieve data from databases or other third-party APIs and process it to meet the front-end requirements. I handle data validation and ingestion to ensure that the system's needs are met. Additionally, I am responsible for debugging and investigating any bugs or errors that may arise. My tasks primarily revolve around back-end development and coding. However, I also have the capability to handle front-end tasks when necessary.

#### **EDUCATIONAL ATTAINMENT**

#### **BS** in Information Technology **Major in System Development**

Central Luzon State University, Science City of Muñoz, Nueva Ecija (2014-2019)

Special Project: Web-Order-Taker with Point-Of-Sale System

#### Secondary

Village Montessori School, Consuelo Subdivision, Gapan City, Nueva Ecija (2010-2014)

#### **Elementary**

Village Montessori School, Consuelo Subdivision, Gapan City, Nueva Ecija (2004-2010)

#### BEHAVIORAL COMPETENCIES

- Willing to be trained
- Strong work Ethics
- Team-Based Oriented
- Persistent and Hard-Working
- Self-motivated

- ◆ Can work under pressure with minimal supervision
- Able to adapt to situations
- Eager to learn new Technology

#### **CHARACTER REFERENCE**

Maria Isabel A. Milagroso System Analyst/College **Professor,** Central Luzon State University, Science City of Muñoz, Nueva Ecija 0917-519-1926

**Lester Andrew Cano** Former Senior Web Developer, Cafe24 PH, Ortigas Center, Mandaluyong City, Metro Manila

#### **Dindo Galang** Pastor,

People's Missionary Church, Gapan City, Nueva Ecija 0995-457-2346

## **WORK EXPERIENCE**

#### Web Developer (Trainee)(OJT)

BMWare Software Development, San Fernando, Pampanga

(February 2019 – May 2019)

• Project Name: Web-Order-Taker with Point-Of-Sale System

Project Type: Public

**Summary:** The web-based system connects to the POS system, enabling customers to order via tablets with a menu interface. This streamlines ordering, reduces errors, and empowers customers to order without cashier or waiter assistance.

#### **Work Details:**

Responsible for developing the REST API backend System consists of two main parts: frontend and backend Focus on creating and implementing the backend component Ensure integration with the database

#### **Tech Stack:**

- Codelgniter
- Mysql

#### **Back-end Developer (Professional Experience)**

Cafe24 Philippines, Ortigas Center, Mandaluyong, NCR

(September 2019 - May 2023)

#### **Experience Summary:**

Cafe 24 is an e-commerce company with multiple teams focusing on various areas. I am a member of the Data Solutions team, working on projects related to the company's data. As mentioned earlier, I have been primarily responsible for developing REST APIs. In the early years of my tenure, the team was exploring new technologies, which provided me with the opportunity to study programming languages such as Java, NodeJS, PHP, and Python. Eventually, the company determined that Python was the best choice due to its easy learning curve and efficient data ingestion capabilities.

I have also gained experience by being transferred between different teams, allowing me to work with existing systems and codebases. Until my recent month, my tasks have primarily revolved around working with data and creating web services.

#### **Projects:**

• Project Name: Business Intelligence's Campaign Editor

Project Type: In-house

**Summary:** The Marketing team uses an internal tool for client campaign creation. It's a drag-and-drop platform with three key elements: target clients, targeting filters, and distribution platforms. Target clients define the audience, filters refine targeting, and platforms determine delivery channels (e.g., Slack, text messages, Line).

#### **Work Details:**

- o Developed REST API
- o Managed data retrieval and insertion
- o Processed data for frontend
- o Ensured data compatibility
- o Designed and implemented scheduling feature

#### Tech Stack:

Front-End: NuxtJS with Typescript integration

**Back-End:** Python Flask **Database:** Mysql

Project Name: Business Intelligence's Segmentation System

Project Type: In-house

**Summary:** The Business Intelligence team uses an analytics tool to analyse data, creating segments for malls and users. The tool has filters for data refinement. It provides saved results and visualizations, automates segment generation, and has a user-friendly query builder, streamlining the process for the team.

#### **Work Details:**

- o Implementing new filters for data customization
- o Addressing bugs and errors in existing filters
- Ensuring a seamless and error-free filtering experience through debugging, troubleshooting, and performance optimization
- Delivering a reliable filtering experience for system users, despite not being part of the original development team

#### **Tech Stack:**

Front-End: NuxtJS with Typescript integration

Back-End: Python Flask

Database: Mysql, Clickhouse, scylla

#### **ADDITIONAL SKILLS AND EXPERIENCE**

#### **♦** Google Searching

• Using the internet to search for solutions to bugs and errors, as well as understanding complex requirements and necessary information.

#### **♦** ChatGPT utilization

• Using AI to improve my algorithms and clean my code. Additionally, utilizing AI for clear documentation and providing concise explanations when necessary.

#### **♦** Graphic Designs (Photoshop)

• In my free time and bored times, I used Photoshop on creating invitations, and manipulating images for enhancements.

#### **♦ Software Development Approaches**

- Waterfall development
- Agile Methodology
- Microservices architecture
- MVC Coding architecture
- Test Driven Design architecture

#### **♦** System Design analysis

- Object Oriented Programming
- SOLID Principles

#### Atlassian Tools

- Jira
- Confluence
